

## Presentation introduction

UUGreenPower is the world's leading service provider of electric vehicle super charging and discharging solutions. It is committed to providing an excellent charging and discharging experience, innovative charging and discharging solutions and reliable charging and discharging equipment for the global electric vehicle market.

The product roadmap planned by UUGreenPower is divided into::

① Large power charging module, including 15/20/30/40/60kW, with the heat dissipation method of IP20 direct ventilation and IP65 direct ventilation/liquid cooling

Application scenarios: large power fast charge for public charge station

IP65 30kW module

30/40kW module

② V2G Bi-directional charger, 7kW has been launched, 11kW/20kW planned for the future

Application scenarios: V2G operated by grid company in China currently and operated by personal user or the third-party operator in European and American market

IP65 7kW V2G charger

③ Low-power DC charger, 7kW/11kW/20kW in the planning stage

Application scenarios: low power DC charge for personal household user instead of AC 7kW charger

More detailed information, we look forward to sharing and discussing in the formal online meeting.

Best wishes.
